Jelly

medium late quality ware potato with suitability for processing to French fries

- very high marketable yield
- nice, medium to big sized
- pure yellow flesh colour
- very good table quality

medium late quality ware potato with suitability for processing to French fries

Variety characteristics			
Maturity	medium late	Tuber	Tuber shape Eye depth Skin Flesh colour Raw discoloration
Cooking Type (EAPR)	B		
Consumption quality	quality ware potato, very low discoloration after boiling, suitability for processing to French fries		
Yield	very high marketable yield, medium sized to large sized tubers, uniform grading	Resistances	PCN Potato wart disease Potato Virus Y (PVY) Leaf blight Tuber blight Black leg Rhizoctonia Common scab
Youth development	rapid		
Dormancy	high, excellent suitable for long term storage	Sensitivities	low very low low
Growing recommendations			
Site requirements	medium demands to the soil quality and water supply. The tolerance to drought is high, and secondary growth will appear only under extreme environmental conditions. Uniform water and nutrient supply is advantageous.		
Planting	planting density	approx. 42.000 plants/ha (seed size 35/55 mm) => check QR Code for more details	
	planting depth	normal compared with local standard	
	seed preparation	normal compared with local standard	
	seed treatment	preventive control of <i>Rhizoctonia solani</i> is generally recommended	
Foliage	Jelly has a good and very strong foliage - protective control of late blight within the usual spraying programme is recommended		
Herbicides	dose rates post emergence application should be avoided		
Fertilization	further information		
Nitrogen	low-medium - compared with local standard		
Phosphorus	100 kg/ha (at planting, water soluble phosphate)		
Potassium	250 – 300 kg/ha		
Magnesium	60 kg/ha		

All particulars are based on official variety trials and/or our own experience. However, as potatoes are natural products we cannot undertake any liability for these details.
